

# Accelerating patient access to their record

NHSX Webinar (01/11/21)

Summary

# Key Points

Future Record Access will be available to all patients via apps such as the NHS App, Patient Access etc.

SystemOne will be enabled first (Dec 21) followed by EMIS (Jan 22)

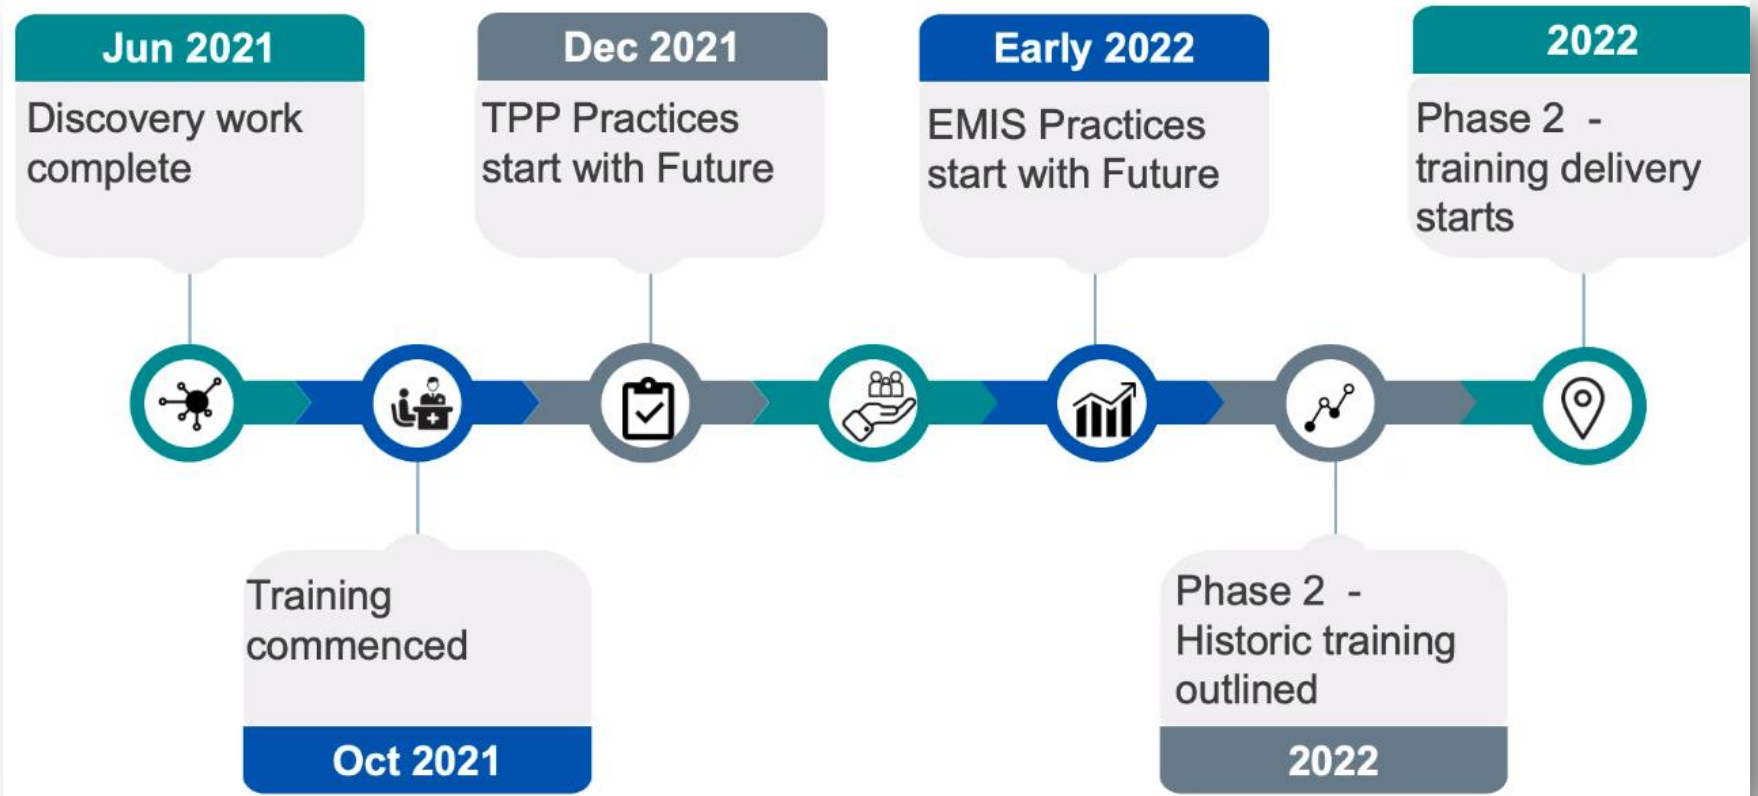

No historical information will be available to patients, however this is the programme pipeline (no date yet)

Patients get access to their future record by default and have access to all correspondence, SNOMED and free text information

Patients will only see information from their current registered practice, previous practice information will not be available

GPs can decline patients access to their own records in particular circumstances

# Timeline

# What we are doing...

- We are attending all briefings held by NHSX and will make all the material and key points available locally
- A website page which will be created to house the information and make it easily accessible
- Ardens & Gem CSU IG/DPO colleagues will be attending the NHSX Safeguarding webinars and will feedback key IG points
- Local materials will be established as required to compliment those created and distributed via the national team

# Things for you to consider...

- Nominate an individual or individuals from your practice as a champion for this work
- Potential changes to processes and procedures that will be impacted e.g. Subject Access Request processes
- Have conversations with staff to consider how notes will be recorded going forward and redaction at the point of entry
- Identifying any patients who you determine should not have access to their own records in the first instance

# Benefits to practices

# Benefits to patients

# Webinars

Webinar links can be accessed here and more are intended to be added: [Getting ready for patients to have access to their future data \(england.nhs.uk\)](https://www.england.nhs.uk/getting-ready-for-patients-to-have-access-to-their-future-data/)
